

Competent/Skilled Persons Training: Mechanical

(HXT-CP01) Boiler & Pressure Systems

A two-day training course designed to provide delegates with an appreciation of the principle aims and objectives of the Mechanical Systems Safety Rules and Procedures.

Who Will Benefit

This course is for Skilled Persons and prospectively persons in supervisory roles who have a requirement to work to company-specific safety rules and procedures for mechanical systems.

Purpose

- Greater understanding and compliance with legislation.
- Better communication with colleagues.
- Compliance with legislation.
- Better documentation, communication and enforcement of safe working procedures.

What Will Be Covered

- Requirements of statutory regulation/legislation.
- Roles and duties of key personnel - AP Mechanical - P in C Mechanical, and Skilled Persons Mechanical.
- An introduction to mechanical safety rules and procedures.
- Review of system components and associated dangers. Mechanical systems risk assessment.
- Safe methods of isolation.
- Creating, documenting and enforcing safe working procedures.

Additional Information

- Delegates complete practical exercises that involve the management, application and control of documentation. There is an emphasis on hands on experience wherever this is possible.
- Assessment is by written paper on an isolation documentation exercise.
- Delegates can bring with them any materials used by their own employer, copies of risk assessments or management systems so that they can see how their materials fit in to the context of the training.

Duration

A 2-day course typically starting at 09:30 and ending at 16:00.
