

Hydro-X Spring Newsletter

As we enter into Spring and daylight and temperatures start to increase, it's important to consider your water system hygiene. Cases of Legionnaires' Disease peak as the temperatures rise. From March 2017 there was an increase in confirmed cases of Legionnaires' Disease with the number of cases only decreasing after September 2017 as temperatures cooled down - [PHE Monthly Legionella report 2017](#).

Hydro-X Legionella Seminar April 2018

Our Hydro-X Legionella Seminar is nearly at capacity! With one month still to go we have only five tickets left available. The seminar will be held at the Edgbaston Cricket Ground on the 12th of April 2018. An additional seminar is due to be held in July, updates to follow.

Ecobuild 2018

On the 6th to 8th of March Hydro-X attended the Ecobuild District Energy exhibition at the Excel Centre in London, showcasing our Hydro-Fil unit. This was a great exhibition, and very relevant to all involved in the construction and innovative heating industries. If you would like further information on the ideas and initiatives Hydro-X are involved in within this area, please [get in touch](#).

The Biggest Problems in Closed Systems

SCALING | BACTERIA | CORROSION

Scaling is one of the primary issues with systems running effectively and efficiently. In our experience scaling is one of the primary causes of down time for systems. Scaling in systems has various effects:

- Causes blockages meaning non-budgeted maintenance/replacement of plant
- Downtime of heating and cooling systems for end-users
- **A 1mm layer of scale will increase energy bills by 25%**

To read more on bacteria and corrosion, or to book in for a free consultation, please click 'Read More'.
